LIBRARY

Lib Name:

Soares fetal liver spleen 1NFLS

Organism:

Homo sapiens

Sex: male

Name Times

Organ: Liver and Spleen

Develop. stage: 20 week-post conception fetus Lab host: DH10B (ampicillin resistant)

Vector:

pT7T3D (Pharmacia) with a modified polylinker

R. Site 1:

Pac I

R. Site 2:

Eco RI

Description:

1st strand cDNA was primed with a Pac I - oligo(dT) primer

double-stranded cDNA was ligated to Eco RI adaptors

(Pharmacia), digested with Pac I and cloned into the Pac I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by

Bento Soares and M. Fatima Bonaldo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDMA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The competent cells E. coli ToplOF by electropration of The cDNA libraries constructed by this method are full-length enriched cDNA library. "

LIBRARY

Lib Name: Soares fetal liver spleen 1NFLS

Organism: Homo sapiens

Sex: male

Organ: Liver and Spleen

Develop. stage: 20 week-post conception fetus Lab host: DH10B (ampicillin resistant)

Vector: pT7T3D (Pharmacia) with a modified polylinker

R. Site 1: Pac I R. Site 2: Eco RI

1st strand cDNA was primed with a Pac I - oligo(dT) primer

double-stranded cDNA was ligated to Eco RI adaptors

(Pharmacia), digested with Pac I and cloned into the Pac I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by

Bento Soares and M. Fatima Bonaldo.
